

# DWA\_08 Discussion Questions

In this module you will continue with your “Book Connect” codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

---

1. What parts of encapsulating your logic were easy?

Restricting direct access to some of the functions components.

---

2. What parts of encapsulating your logic were hard?

Mostly using getters and setters and where I could actually use encapsulation without confusing myself too much and how to use factories.

---

3. Is abstracting the book preview a good or bad idea? Why?

Good idea because there are so many components of the code that are repeated and creating abstraction for book preview is not only making the code easier to read but also maintainable.
